

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (previously presented): A method of signaling compressed mode parameters to a mobile station from a mobile radiocommunications network, the method comprising transmitting, from said network to said mobile station, a signaling message containing said compressed mode parameters together with measurement control parameters for radio measurements to be performed by said mobile station.

2. (previously presented): The method according to claim 1, wherein said measurement control parameters indicate whether a type of radio measurements to be performed are intra-frequency, inter-frequency, or inter-system type measurements.

3. (currently amended): A mobile radiocommunications network equipment ~~comprising a base station for transmitting~~ configured to transmit to a mobile station a signaling message containing compressed mode parameters and measurement control parameters for radio measurements to be performed by the mobile station.

4. (previously presented): The network equipment according to claim 3, wherein said measurement control parameters indicate whether a type of radio measurements to be performed by the mobile station are intra-frequency, inter-frequency, or inter-system type measurements.

5. (previously presented): A mobile station configured to receive compressed mode parameters in a signaling message which is transmitted thereto by a mobile radiocommunications network, the signaling message containing measurements control parameters for radio measurements to be performed by the mobile station.

6. (previously presented): The mobile station according to claim 5, wherein said signaling message indicates whether a type of radio measurements to be performed by the mobile station is intra-frequency, inter-frequency, or inter-system type measurements.

7. (previously presented): The method according to claim 1, wherein said signaling message is a measurement control message.

8. (previously presented): The network equipment according to claim 3, wherein said signaling message is a measurement control message.

9. (previously presented): The mobile station according to claim 5, wherein said signaling message is a measurement control message.
